

## Depth-of-Knowledge (DOK) Levels for Science

According to Norman L. Webb, Wisconsin Center for Educational Research (“Depth-of-Knowledge Levels for Four Content Areas,” March 28, 2002), “interpreting and assigning Depth-of-Knowledge Levels to both objectives within standards and assessment items is an essential requirement of alignment analysis. Four levels of Depth-of-Knowledge are used for this analysis.” Norman Webb’s “Depth-of-Knowledge Levels for Four Content Areas” include: Language Arts (Reading, Writing), Mathematics, Science, and Social Studies.

A general definition for each of the four (Webb) Depth-of-Knowledge levels is followed by Table 1, which provides further specification and examples for each of the DOK levels. Webb recommends that large-scale, on-demand assessments in reading should only assess Depth-of-Knowledge Levels 1, 2, and 3. Depth-of-Knowledge at Level 4 in science should be reserved for local assessment only.

### Descriptors of DOK Levels for Science (based on Webb and Wixson, March 2002)

**Level 1 Recall and Reproduction** requires recall of information, such as a fact, definition, term, or a simple procedure, as well as performing a **simple** science process or procedure. Level 1 only requires students to demonstrate a rote response, use a well-known formula, follow a set procedure (like a recipe), or perform a clearly defined series of steps. A “simple” procedure is well-defined and typically involves only **one-step**. Verbs such as “identify,” “recall,” “recognize,” “use,” “calculate,” and “measure” generally represent cognitive work at the recall and reproduction level. Simple word problems that can be directly translated into and solved by a formula are considered Level 1. Verbs such as “describe” and “explain” could be classified at different DOK levels, depending on the complexity of what is to be described and explained.

A student answering a Level 1 item either knows the answer or does not: that is, the answer does not need to be “figured out” or “solved.” In other words, if the knowledge necessary to answer an item automatically provides the answer to the item, then the item is at Level 1. If the knowledge necessary to answer the item does not automatically provide the answer, the item is at least at Level 2.

**Level 2 Skills and Concepts** includes the engagement of some mental processing beyond recalling or reproducing a response. The content knowledge or process involved is **more complex** than in level 1. Items require students to make some decisions as to how to approach the question or problem. Keywords that generally distinguish a Level 2 item include “classify,” “organize,” “estimate,” “make observations,” “collect and display data,” and “compare data.” These actions imply **more than one step**. For example, to compare data requires first identifying characteristics of the objects or phenomenon and then grouping or ordering the objects. Level 2 activities include making observations and collecting data; classifying, organizing, and comparing data; and organizing and displaying data in tables, graphs, and charts.

**Some action verbs, such as “explain,” “describe,” or “interpret,” could be classified at different DOK levels, depending on the complexity of the action.** For example, interpreting information from a simple graph, requiring reading information from the graph, is a Level 2. An item that requires interpretation from a complex graph, such as making decisions regarding features of the graph that need to be considered and how information from the graph can be aggregated, is at Level 3.

**Level 3 Strategic Thinking** requires deep knowledge using reasoning, planning, using evidence, and a higher level of thinking than the previous two levels. The cognitive demands at Level 3 are **complex and**

**abstract.** The complexity does not result only from the fact that there could be multiple answers, a possibility for both Levels 1 and 2, but because the multi-step task requires **more demanding reasoning**. In most instances, requiring students to explain their thinking is at Level 3; requiring a very simple explanation or a word or two should be at Level 2. An activity that has more than one possible answer and requires students to justify the response they give would most likely be a Level 3. Experimental designs in Level 3 typically involve more than one dependent variable. Other Level 3 activities include drawing conclusions from observations; citing evidence and developing a logical argument for concepts; explaining phenomena in terms of concepts; and using concepts to solve non-routine problems.

**Level 4 Extended Thinking** requires **high cognitive demand** and is **very complex**. Students are required to make several connections—relate ideas *within* the content area or *among* content areas—and have to select or devise one approach among many alternatives on how the situation can be solved. Many on-demand assessment instruments will not include any assessment activities that could be classified as Level 4. However, standards, goals, and objectives can be stated in such a way as to expect students to perform extended thinking. “Develop generalizations of the results obtained and the strategies used and apply them to new problem situations,” is an example of a Grade 8 objective that is a Level 4. Many, but not all, performance assessments and open-ended assessment activities requiring significant thought will be at a Level 4.

Level 4 requires complex reasoning, experimental design and planning, and **probably will require an extended period of time** either for the science investigation required by an objective, or for carrying out the multiple steps of an assessment item. However, the extended time period is not a distinguishing factor if the required work is only repetitive and does not require applying significant conceptual understanding and higher-order thinking. For example, if a student has to take the water temperature from a river each day for a month and then construct a graph, this would be classified as a Level 2 activity. However, if the student conducts a river study that requires taking into consideration a number of variables, this would be a Level 4.

Table 1: Detailed Descriptors of Depth-of-Knowledge Levels for Science  
(K. Hess, Center for Assessment, based on Webb, update 2005)

<b>Level 1</b> <b>Recall &amp; Reproduction</b>	<b>Level 2</b> <b>Skills &amp; Concepts</b>	<b>Level 3</b> <b>Strategic Thinking</b>	<b>Level 4</b> <b>Extended Thinking</b>
<ul style="list-style-type: none"> <li>a. Recall or recognize a fact, term, definition, simple procedure (such as one step), or property</li> <li>b. Demonstrate a rote response</li> <li>c. Use a well-known formula</li> <li>d. Represent in words or diagrams a scientific concept or relationship</li> <li>e. Provide or recognize a standard scientific representation for simple phenomenon</li> <li>f. Perform a routine procedure, such as measuring length</li> <li>g. Perform a <b>simple</b> science process or a set procedure (like a recipe)</li> <li>h. Perform a clearly defined set of steps</li> <li>i. Identify, calculate, or measure</li> </ul> <p><b>NOTE: If the knowledge necessary to answer an item automatically provides the answer, it is a Level 1.</b></p>	<ul style="list-style-type: none"> <li>a. Specify and explain the relationship between facts, terms, properties, or variables</li> <li>b. Describe and explain examples and non-examples of science concepts</li> <li>c. Select a procedure according to specified criteria and perform it</li> <li>d. Formulate a routine problem given data and conditions</li> <li>e. Organize, represent, and compare data</li> <li>f. Make a decision as to how to approach the problem</li> <li>g. Classify, organize, or estimate</li> <li>h. Compare data</li> <li>i. Make observations</li> <li>j. Interpret information from a simple graph</li> <li>k. Collect and display data</li> </ul> <p><b>NOTE: If the knowledge necessary to answer an item <u>does not</u> automatically provide the answer, then the item is at least a Level 2. Most actions imply more than one step.</b></p> <p><b>NOTE: Level 3 is complex and abstract. If more than one response is possible, it is at least a Level 3 and calls for use of reasoning, justification, evidence, as support for the response.</b></p>	<ul style="list-style-type: none"> <li>a. Interpret information from a complex graph (such as determining features of the graph or aggregating data in the graph)</li> <li>b. Use reasoning, planning, and evidence</li> <li>c. Explain thinking (beyond a simple explanation or using only a word or two to respond)</li> <li>d. Justify a response</li> <li>e. Identify research questions and design investigations for a scientific problem</li> <li>f. Use concepts to solve non-routine problems/more than one possible answer</li> <li>g. Develop a scientific model for a complex situation</li> <li>h. Form conclusions from experimental or observational data</li> <li>i. Complete a multi-step problem that involves planning and reasoning</li> <li>j. Provide an explanation of a principle</li> <li>k. Justify a response when more than one answer is possible</li> <li>l. Cite evidence and develop a logical argument for concepts</li> <li>m. Conduct a designed investigation</li> <li>n. Research and explain a scientific concept</li> <li>o. Explain phenomena in terms of concepts</li> </ul>	<ul style="list-style-type: none"> <li>a. Select or devise approach among many alternatives to solve problem</li> <li>b. Based on provided data from a complex experiment that is novel to the student, deduct the fundamental relationship between several controlled variables.</li> <li>c. Conduct an investigation, from specifying a problem to designing and carrying out an experiment, to analyzing its data and forming conclusions</li> <li>d. Relate ideas <i>within</i> the content area or <i>among</i> content areas</li> <li>e. Develop generalizations of the results obtained and the strategies used and apply them to new problem situations</li> </ul> <p><b>NOTE: Level 4 activities often require an extended period of time for carrying out multiple steps; however, time alone is not a distinguishing factor if skills and concepts are simply repetitive over time.</b></p>
